

**Note on methodology and synthesis:** This research brings together evidence from Islamic scriptures, archaeology, and various scientific fields. While the overall framework presented here is original, we acknowledge that many individual elements, such as the geopolymmer hypothesis or acoustic physics theories, have been proposed in various forms by other independent researchers. Our primary contribution is not to fabricate each piece of evidence individually, but rather to weave these disparate threads into a single, coherent narrative, grounded in an Islamic framework, which, we argue, ultimately allows all elements to be interconnected.

## **Introduction: Cold Case Brief**

Memorandum to the Principal Investigator

**Subject:** An investigation into the periodic civilizational reset

## **Welcome to the investigation.**

The case before you is the oldest ever, a criminal investigation into a pattern of technological rise and catastrophic collapse that

predates known history.

Our subject is an advanced pre-Flood civilization that disappeared, leaving behind evidence so profound and disturbing that it has been deliberately misinterpreted or dismissed as myth.

## **Case Summary:**

Our intelligence indicates the existence of an antediluvian civilization that mastered what can only be called "divine science." Its people lived for centuries, amassing a library of knowledge that allowed them to build a global wireless power grid, manipulate the planet's electromagnetic fields, and achieve feats of precision engineering that still exceed our modern capabilities.

But this issue isn't about celebrating lost technology; it's about confronting the consequences of its misuse. The trail of evidence suggests that their mastery extended disastrously to genetic engineering, where, in an act of sheer hubris, they created distinct human classes and treated the sacred code of life itself as raw material for their ambitions. This utter corruption became so ingrained in the fabric of their world that a planetary "reset" was necessary, a great flood that wiped out everything.

The central question of this investigation is not just what happened to them, but whether we are on the same path. What if humanity's greatest mystery is not about the distant past, but about identifying a dangerous pattern that is being repeated now, in our laboratories and our societies?

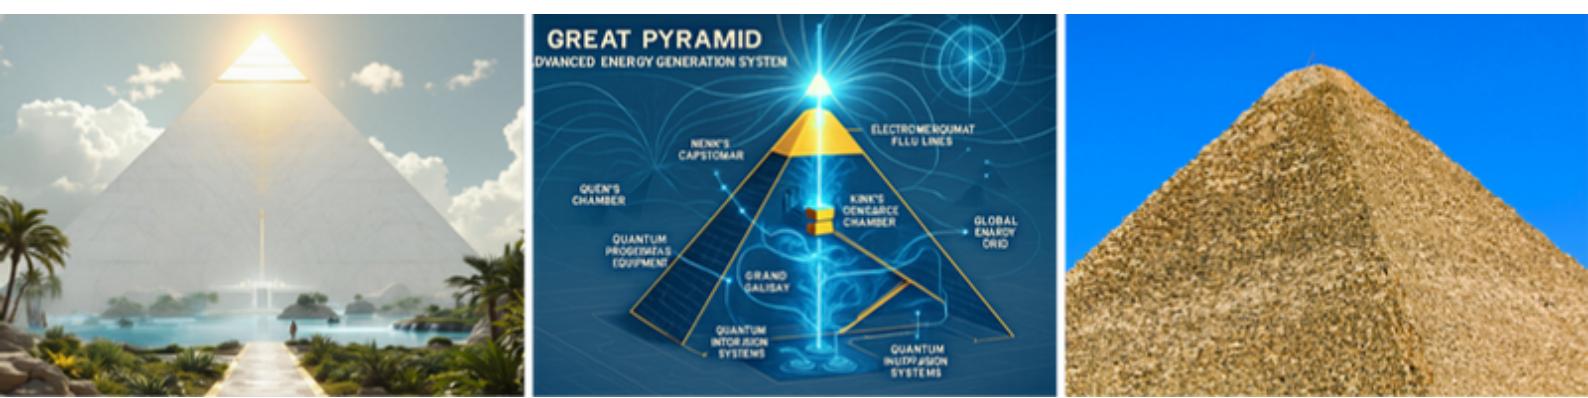

## **Investigation framework and methodology:**

Our approach is unique, combining archaeology, forensic evidence, and testimony from Islamic texts. To address this issue, we will analyze five distinct categories of evidence:

archaeological variation, Islamic textual evidence, technological signature, genetic signature, and ethical pattern.

Our methodology begins by exploring the deep historical narratives preserved in religious sources such as the Quran and the Prophetic traditions (Hadith). These narratives serve as powerful ancient testimonies, providing tentative hypotheses about the "what" and "why" of past events. This framework then guides our search for material evidence. Each scientific hypothesis related to the "how" (e.g., sonic levitation, genetic modification) is rigorously tested against archaeological, geophysical, and genetic data. This integrated "Islamо-scientific" approach uses religious texts as a vital source of ancient data to unlock new scientific explanations for material variation that leaves current paradigms at a dead end. The investigation begins now.

## Part One: Crime Scene - Evidence on the Ground

## Chapter One: The Energy Source Puzzle

### Field Note - Giza Plateau, 04:00:

The air here is thick with more than just sand. Before the noise of the city and the tourists arrives, there is a low, resonant hum that seems to emanate from the stones themselves, a vibration

you feel in your bones. Standing at the base of the Great Pyramid, you realize with absolute certainty that it wasn't built for burial. It was built for a purpose. It is a machine, currently dormant, waiting for a current to awaken it again.

## Annex A-1: Specifications of the Great Pyramid

- **Evidence Type:** Physical/Architectural
- **Location:** Giza, Egypt
- **Main results:**
  - Impossible size and precision: It consists of 2.3 million stone blocks, some weighing over 15 tons, lifted and positioned with millimeter precision.[1] The foundation is level to within 2.1 centimeters across a 230-meter-long base, and its orientation to the cardinal directions is accurate to within 3/60 of a degree, a feat most contemporary engineers struggle to replicate.
  - **Encrypted data:** The dimensions and proportions of the structure encode advanced mathematical and physical constants, including  $\pi$  (pi),  $\varphi$  (the golden ratio), and the precise speed of light, which were presumably unknown to the Bronze Age builders.[2]
  - **Functional design:** The interior chambers and passages possess unique and powerful acoustic resonance properties. [3] The King's Chamber, built of high-quartz Aswan granite, is a piezoelectric transducer capable of converting vibrations into electricity.[5] Historical accounts describe the now-lost pinnacle as a magnificent conductor made of electrum or gold, suggesting that it was the final antenna of a massive power device.[6]
- **The prevailing interpretation:** The official narrative is that the Great Pyramid was built around 2560 BC by the workmen of Pharaoh Khufu using copper chisels and physical force to serve as a tomb for the king. This theory is based primarily on two pieces of evidence: inscriptions in red that resemble the name "Khufu" found in a sealed relief chamber, and the "Merre Papyrus," a record of the transport of the limestone casing stones.[1]
- **Interrogation by the Investigator:** The traditional theory relies heavily on the inscriptions found by Howard Weiss and the Merr

Papyrus. However, forensic analysis shows that they are not conclusive evidence. The inscriptions are crude, misspelled, and informal, more consistent with the markings of a later restoration team than with a sacred royal inscription. The Merr Papyrus details the transportation of casing stones for a project called "Khufu's Sister," strongly suggesting a re-capping or restoration project, rather than the original construction of a monument consisting of 2.3 million blocks. When the traditional evidence is viewed as evidence of restoration, rather than construction, the entire "tomb" theory collapses. It fails to explain the impossible precision, the cryptic data, the functional design, and the absence of an original body. The strongest explanatory hypothesis suggests a technological function.

### **Field note - Al-Nasla Rock Formation, Tayma Oasis:**

Before this memorial, the silence of the desert reigns. You run your hand over the cut surface and find it completely smooth, unnaturally so. There are no lines, no chisel marks, nothing to indicate the friction of a violent saw.

The two halves of the massive rock stood apart as if separated by a thought. This wasn't brute force, it was surgery. This was a technique that understood the bonds that held matter together.

## **Chapter Two: Impossible Construction Methods**

### **Attachment B-1: Precision cutting of the blade**

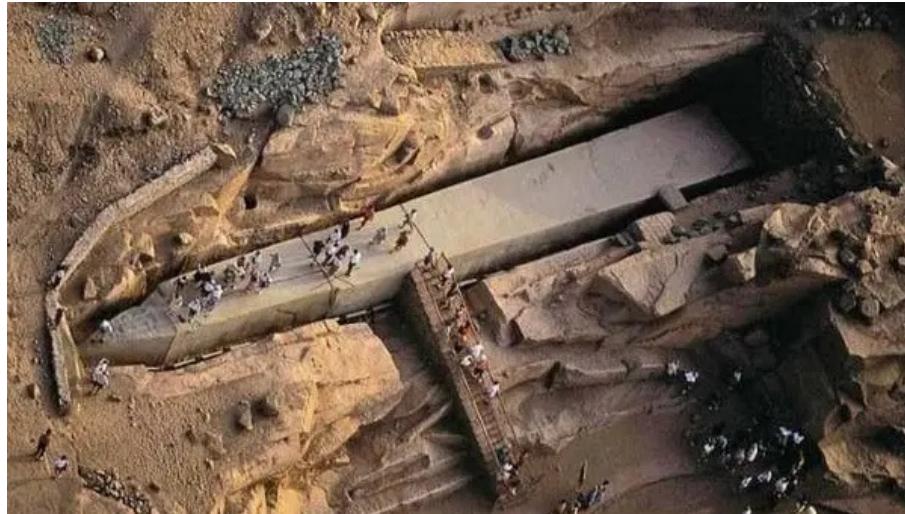

- **Guide Type: Geological**
- **Location: Tayma Oasis, Kingdom of Saudi Arabia**
- **Main results:**
- The massive sandstone formation is cut so perfectly straight and smooth that it defies any known primitive or natural process.
- The cuts are maintained throughout the entire depth of the rock without deviation.
- There is a complete absence of instrument marks. Natural explanations, such as joints or freeze-thaw cycles, do not account for the laser's accuracy.

**Investigator's Note:** This artifact strongly suggests a technology capable of separating molecules. It appears to be a technological milestone, perhaps evidence of the ability of a post-Flood civilization to rediscover a piece of ancient science.

- **Annex B-2: Serapeum boxes**
- **Directory Type: Manufacturing**
- **Location: Saqqara, Egypt**
- **Main results:**
- In underground tunnels are more than 20 massive granite boxes, each weighing up to 100 tons.
- The interior surfaces are mirror-polished, with perfectly flat planes and corners cut at precise right angles. Tolerances are measured to within 0.0002 inches.[12]
- The lids fit so perfectly that once closed, they will be airtight.
- **Prevailing interpretation:** The boxes were intended as coffins for the sacred Apis bulls.
- **Investigator's Question:** The "coffin" theory fails to explain the extreme precision. The most logical hypothesis, given our understanding of the energy grid, is that these devices were

operating efficiently. Working with high energy fields can be dangerous; perhaps these finely tuned granite chambers served as biological recovery capsules, using resonant frequencies to repair cellular damage in the operators.

- **Annex B-3: The Unfinished Obelisk - A Failed Imitation**

- **Evidence Type:** Archaeological/Toolmark Analysis
- **Location:** Aswan, Egypt
- **Main results:**
- A massive obelisk, weighing 1,200 tons, lies in its quarry, unfinished, cracked, and abandoned. The methods used to extract it are clearly visible: the traces of thousands of pounds of workers hand-carving the dolerite.
- **Interrogation of the Inquisitor:** Mainstream Egyptology presents this as conclusive evidence of how obelisks were made. This conclusion is false. An unfinished obelisk is not evidence of how successful and fully finished obelisks were made; it is evidence of how they were not made.
- It represents a failed attempt by a later, less technologically advanced civilization to imitate the work of its predecessors. It attempted to extract a massive block using primitive methods relying on brute force, and failed miserably. This artifact represents a powerful symbol of technological decline.

## Annex E-3: Evidence of Allocation

**Evidence Type:** Weathering Analysis/Signature of Cargo Worship

**Main results:**

**Replacement of the Sphinx's head:** The head shows no water erosion while the body shows extensive damage caused by rainfall patterns predating 10,000 BC.

**Scale Mismatch:** The head is 1/7 the size it should be relative to the body.

**Different materials:** The head is carved from a different limestone than the body.

**Editor's Note:** Traditional commodity worship. The Pharaohs found the Sphinx pointing toward Arabia and could not tolerate a monument that did not honor Egypt.

They carved the original head and replaced it with their own. This is direct physical evidence of historical appropriation and technological theft.

**Figure A-5: Gobekli Tepe**

## GÖBEKLİ TEPE World's Oldest (12,000 years old) and Biggest Temple

**Göbekli Tepe**  
Excavation area of Göbekli Tepe  
is 1.2 km away from the next Neolithic, Çatalçayır, and 10 km from  
the nearest city, Urfa, in southeastern Turkey. Göbekli Tepe's  
symbol is a T-shaped pillar. The pillars are in the first and second  
concentric circles. The pillars are made of limestone and date back  
to 10,000-12,000 BC (6,000-8,000 BC). The oldest site on the hill - what is visible at  
the moment - is nearly  
12,000 years old. The Göbekli Tepe excavation area measures about  
400x400 meters (larger than 12 football fields).  
The hill, which protects Stone Age ruins inside, as can be seen  
from its name (Göbekli=hill), is round-shaped and situated in  
the center of the hill. The hill is 12 meters high.  
Excavations at Göbekli Tepe started under the direction of  
Klaus Schmidt (1993-2004) and the German Archaeology Institute  
in 1995. The excavations are conducted by the German Archaeology  
Institute and the Ministry of Culture and Tourism.

**Central Backrooms**  
The circular enclosures at Göbekli Tepe, designated as 'Central Backrooms', were built to store grain and water, and to protect people from the elements. The diameter of enclosures are between 40 and 50 meters.

**Basins**  
The floors of the enclosures are recorded as stable  
bedrock. The pedestals of the pillars were cut out of the bedrock.

**Central T-shaped Pillars**  
There are nine large, parallel pillars in the center of the hill. They are arranged in two concentric circles. The larger pillars are the central pillars of the larger enclosures. The central pillar of the larger enclosure is 6 meters tall and stands independently. All the other pillars are smaller and stand in pairs. The height of the pillars varies from 1.5 to 3.5 meters. The height of the central pillar is around 6 meters. The height of the smaller pillars is around 2 meters.

**Monolithic and Basalt Pillars**  
Monolithic pillars are made of single blocks of 100-120 tons  
and are arranged in the surrounding walls. Central and  
outer walls of the hill are made of monolithic pillars,  
which are mostly made of basalt. The pillars of Göbekli Tepe  
measure more than 100. They are between 1.5 and  
3.5 meters in height.

**Pillars on T-shaped Pillars**

There are 12 small, rectangular pillars on each central column.

These pillars are called 'Figurines'. A total of 120 are known.

The symbols on the pillars are mostly abstract.

In addition to the geometric shapes, there are also animal symbols in the form of an ostrich, a vulture, a stag, and some other unknown combinations.

**UNESCO**

The Pillar of Göbekli Tepe  
The Pillar of Göbekli Tepe

## Evidence Type: Archaeological/Structural Analysis

### Location: Southeastern Türkiye

### Main results:

Massive T-shaped stone columns weighing up to 16 tons, arranged in circular patterns.

Carbon dating dates back to 11,600 BC (6,000 years older than Stonehenge).

High-quartz limestone with piezoelectric properties

The animal carvings appear to be later additions to later civilizations.

**Investigator's Note:** The original construction exhibits the same high precision as other network sites. The circular arrangement and

piezoelectric limestone suggest that it was used as an amplification station in the global network. The animal carvings are evidence of a later occupation, as later cultures found the site and "decorated" it according to their understanding.

## **Technological Signature Analysis: A Comparative Evaluation**

To fully understand the anomalous nature of these artifacts, we must compare the proposed "divine science" with the accepted tools of the era and our modern capabilities.

<b>Technology category</b>	<b>Proposed "Divine Science"</b>	<b>traditional (mainstream) Egyptology</b>	<b>Modern Industrial Analog</b>
<b>Heavy lifting (limestone)</b>	Acoustic Levitation: Mass neutralization by ultrasound-induced internal hydrogen buoyancy. Precise and easy placement.	Brute force: Massive human force (tens of thousands of workers) pulling blocks up steep earthen slopes on wooden sleds.	Heavy cranes: Mechanical lifting powered by diesel or electricity. Efficient, but requiring massive infrastructure and high energy consumption.
<b>Hard stone cutting (granite)</b>	Activated wire: Non-thermal decomposition of molecular bonds. Perfect cuts without friction and without tool marks.	Copper and sand saws: Using fine copper saws with quartz sand as an abrasive. A very slow and laborious process.[27]	Plasma/laser arc cutting: High-intensity thermal processes that melt or vaporize stone. They require high power (e.g., 40 kW) and leave traces of extreme heat (melting and microcracks).[28]
<b>hard stone formation (granite)</b>	Frequency-based shaping: Precise material removal using tuned (estimated) resonance.	Dolerite stones: Crushing granite using hand-held, solid dolerite stones to slowly break it down into its final form.[30] This is incredibly time-consuming and inaccurate.	CNC machining with diamond heads: Computer-controlled milling and cutting. It achieves high precision, but is a slow, friction-based abrasive process.

**Conclusion:** Field evidence does not conform to the limitations of conventional archaeological tools. Furthermore, it points to a

technology operating on a physical principle distinct from our modern thermal and mechanical methods based on brute force. These artifacts are the hallmarks of a lost science.

## Reconstructed Testimony: The Lost Science

Two adjacent pyramid stones. Note the small oval cavity between them, indicated by the arrow. This cavity is evidence that the stones were cast from clay in a rocky mold. This cavity was formed during the casting of the stones, and was not caused by erosion. Rather, it originated from these stones. Michel Barsoum, Drexel University

## Witness Statement W2

- **Source:** The Holy Quran, Surat Al-Qasas, Verse 38.
- **Testimony:** And Pharaoh said, “O eminent ones, I do not know of any god for you other than me. So ignite for me, O Haman, upon the clay and make for me a tower that I may look up to the god of Moses. And indeed, I think he is among the liars.”

**Investigative note:** This is an admission of technological inferiority. Haman is a title given to “chief engineer.” Pharaoh does not order him to quarry huge stones, but rather to bake bricks (“fire the clay”). This is a clear admission that his civilization could only produce inferior

imitations, from geopolymers or fired composite materials, because it had lost the original stone-working technology.[13] This is evidence of technological decline, not progress.

والله اعلم

## Connecting the threads (building hypotheses)

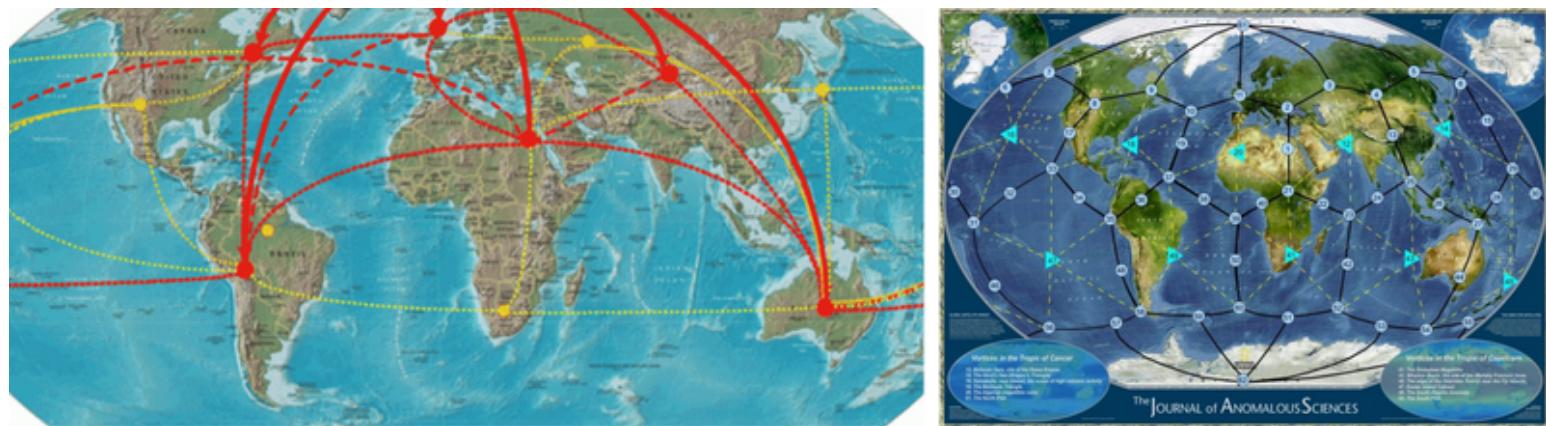

- **Introduction 1:** Physical evidence points to building capabilities that cannot be explained by the use of primitive tools.[14]
- **Second premise:** The "brute force" model fails. It requires an understanding of molecular resonance, frequency, and the properties of matter.
- **Introduction 3:** Witness testimony (W2) reveals that later civilizations lost this technology and resorted to inferior imitation methods.

**Basic Hypothesis:** Our investigations indicate that the original pre-Flood building technology was a unified system based on "divine science."

- **Acoustic Resonance (Enhanced for Limestone):** Our analysis suggests that this technique was particularly effective on the porous Tura limestone. By tuning an acoustic device to the stone's molecular frequency, the builders were able to induce acoustic analysis, which splits interstitial water ( $H_2O$ ) into hydrogen and oxygen.[15] The acoustic field simultaneously compresses the outer layer of the stone, trapping the compressed hydrogen within. In short, the stone mass becomes a solid hydrogen balloon, its enormous weight largely negated by the buoyant gas trapped within its crystalline matrix. This allowed it to be easily transported, with the wider electromagnetic grid providing ultimate guidance for its precise placement.
- **Energized wire cutting:** To cut any material accurately, our analysis suggests that a thin, strong metal wire energized with a concentrated electromagnetic field is most likely to be used. This field breaks molecular bonds along its path, separating the material with extreme precision without friction or tool marks.[14]

## Annex A-2: The Global Network and Supporting Myths

## **Annex A-5: World Wide Web Network**

**Guide Type:** Electromagnetic/Geoanalysis

**Location:** Globally coordinated locations

**Main results:**

**Basic Nodes:** Great Pyramid (central axis), Stonehenge (Northern Europe connection), Temples of Malta (Mediterranean node), sites in South America (Western hemisphere extension).

**Earth Chakra Points:** All major locations lie precisely on planetary electromagnetic vortex points and energy meridians.

**Mathematical coordination:** Sites aligned with impossible precision across continents, proving central planning.

**Frequency Sync:** All sites are tuned to the Earth's resonant frequency (7.83 Hz - Schumann Resonance).

**Investigator's Note:** This was not a random construction. Someone designed a global energy distribution system using the Earth's natural

electromagnetic grid. The precision of this alignment demonstrates advanced knowledge of planetary energy fields and coordinated global engineering.

- **Guide Type:** Geographical/Electromagnetic and Mythology from Multiple Cultures
- **Main results:**
  - **Precision Pattern:** The same impossible megalithic precision seen at Giza is repeated at sites around the world: Göbekli Tepe (Turkey), Puma Punku (Bolivia), Baalbek (Lebanon), and even in massive stones precisely cut in ancient quarries such as Mount Nokogiri in Japan.

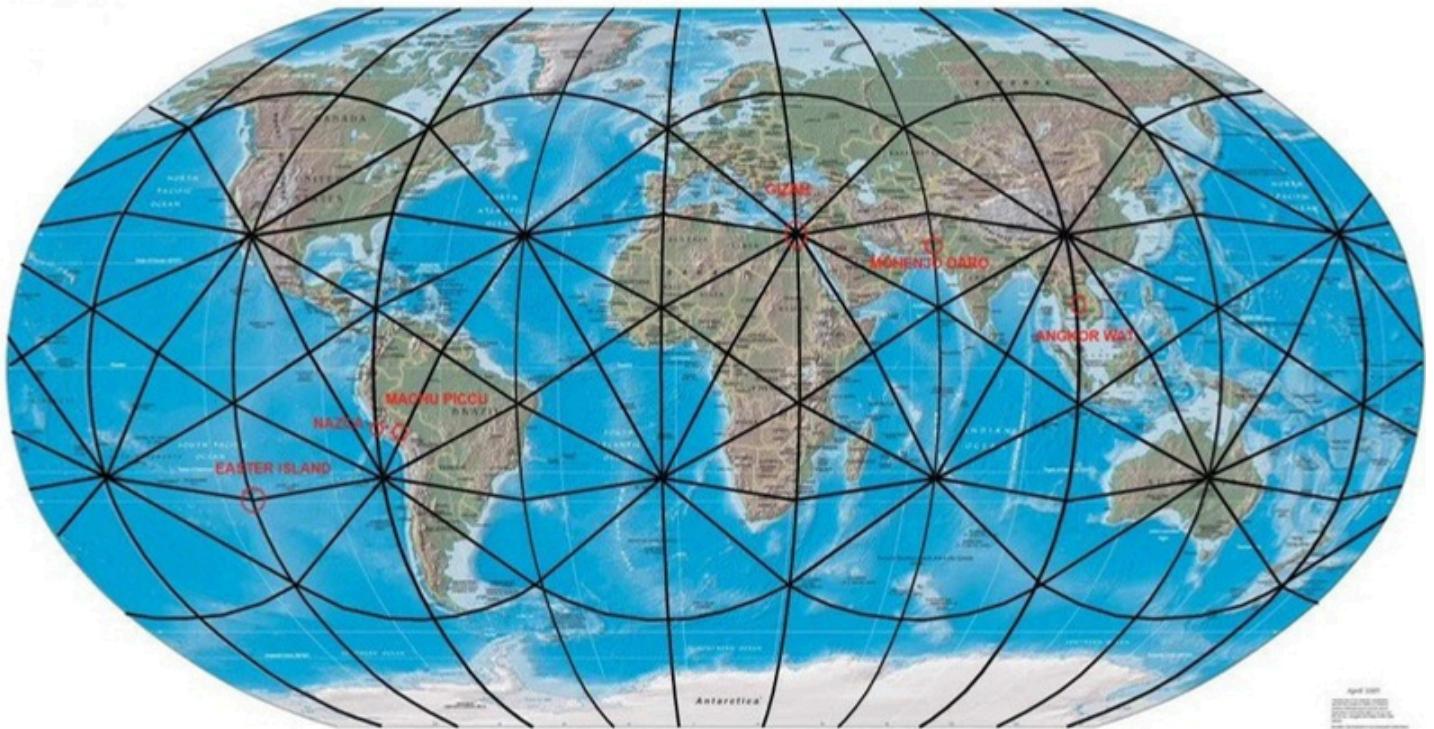

**Submerged Variations:** The discovery of large, submerged man-made structures and geometries off the coasts of Japan (Yonaguni Monument) and India (Gulf of Khambhat and Dwarka) provides compelling evidence of a global civilization active before the last catastrophic sea-level rise.

**Strategic Locations:** These key sites, both above and below water, are intelligently located at energy hotspots on the planet and align with mathematical precision along a global electromagnetic grid. This suggests they operated as a coordinated network, tapping into the Earth's natural energy.

**Echo of the “Knowledge Bringer”:** Crucially, the local myths associated with many of these sites contain a recurring theme. In Japan, the Ishi-no-Hōden megalithic stone is said to have been built by gods who came from another land to build a palace. In India, Krishna is credited with creating the original Dwarka. Across the Pacific, Mesoamerican myths speak of a “civilizing god” (Viracocha or Quetzalcoatl) who arrived after a great flood to share knowledge of science and law.

- **Investigator's Note:** The physical evidence for a global network is supported by a global pattern in cultural memory. These are not isolated legends; they are fragmentary testimonies from witnesses describing the same phenomenon: a technologically advanced earlier civilization whose members were remembered as "gods" or "bringers of knowledge" by the less advanced populations they encountered after the Flood.

وَاللّٰهُ أَعْلَم

## Annex A-3: Circuit Board Difference

### ANCIENT SITES AND TEMPLES DESIGNS CIRCUIT BOARD CONNECTION

Temple of Apollo in Delphi, Greece

Computer circuit board

Pueblo Bonita in Chaco Canyon, New Mexico, USA

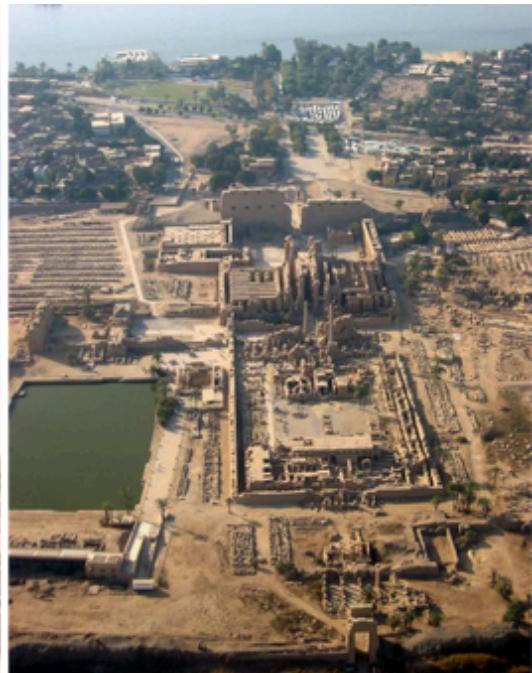

Computer circuit board design

Aerial photo of Persepolis, Iran

Computer circuit board

- **Guide Type:** Geospatial / Comparative Technology
- **Location:** Karnak Temple Complex, Egypt and other sites
- **Main results:**
  - Viewed from above, the vast layout of the Karnak temple complex, with its intricate pathways, pylons, and

strategically placed obelisks, shows a striking resemblance to the design of a modern computer motherboard or power distribution circuit.

- This is not an isolated case. Similar "circuit board" designs are found in other ancient temples and cities around the world.
- The presence of large man-made pools of water next to key sites such as Karnak suggests that water was a crucial functional component, perhaps for cooling or as part of the power generation process itself, reflecting the hydraulic pulse hypothesis for the Great Pyramid.

**Investigator's Note:** To dismiss this as mere coincidence (pareidolia) is to ignore the context. These locations exhibit unusual electromagnetic variation. The mathematical relationships with other world locations and the functional placement of components (e.g., obelisks as transmitters) strongly suggest a functional, rather than purely symbolic, design. The ancient Egyptians likely built their temples on the ruins of an earlier technological center, mistakenly believing the energy conduits and component platforms to be sacred pathways and foundations.

## Annex A-4: The Queen's Chamber Corridor Puzzle

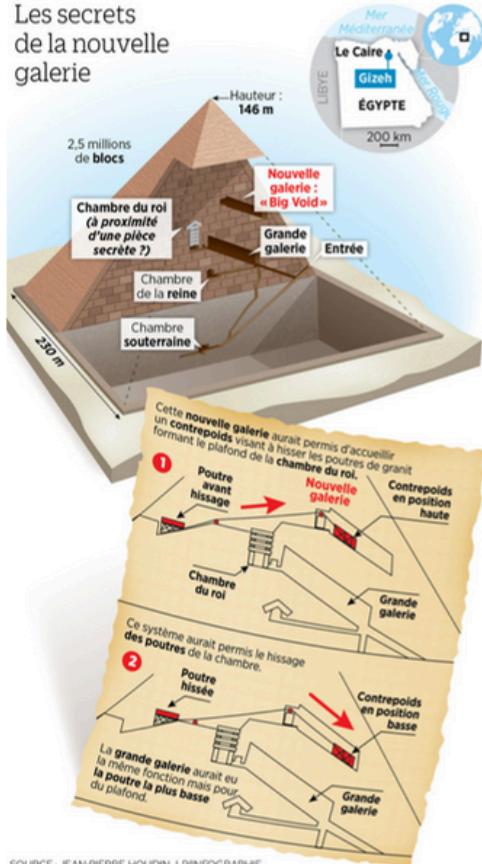

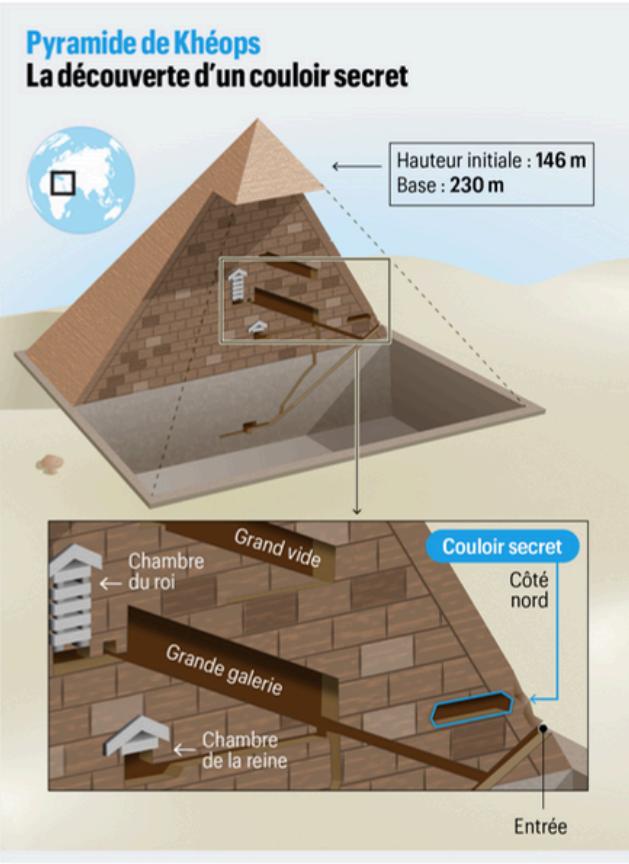

- **Guide Type:** Robotic/Archaeological
- **Location:** Great Pyramid, Queen's Chamber
- **Main results:**

- A series of robotic explorations (Project OppoWave in 1993 and Project Geddy in 2011) of the narrow 8x8-inch passages that spiral upward from the Queen's Chamber revealed that they do not exit the pyramid. Instead, they terminate deep within the structure at small, closed stone blocks, often referred to as the "Gantenbrink Door."
- Inside this first stone block are two deliberately placed pieces of copper that are very unusual. They are not for decoration; they are clearly functional components penetrating the block. A small camera sent behind this first block revealed a second, rougher block behind it, and more mysterious copper components.[7]

**Questioning by the investigator:** The traditional "tomb" theory offers no explanation whatsoever for these features. What possible funerary or symbolic purpose could a closed passageway containing finely crafted copper electrical fittings have? This is one of the strongest physical pieces of evidence for a technological function. It strongly suggests that the passageways were conduits for liquids, gases, or energy, and that the copper fittings were electrodes, sensors, or terminals for a chemical or electrical process.

## **Attachment A-5: The “Great Void” Variation in the ScanPyramids Project**

SOURCE : JEAN-PIERRE HOUDIN, LPINFOGRAPHIE.

- **Guide Type:** Muon Tomography / Particle Physics
- **Location:** Great Pyramid, above the Grand Gallery
- **Main results:**
  - In November 2017, the international ScanPyramids project announced the discovery of a large void inside the Great Pyramid using cosmic muon radiography, the first major internal structure discovered since the 19th century.
  - The "Large ScanPyramids Void" was discovered above the Grand Gallery, 30 meters (98 feet) long and with a cross-section similar to the gallery below. The discovery was confirmed by three independent teams using different muon detection techniques, further strengthening its scientific credentials.
  - The purpose of the void is unknown, but speculation suggests it may have been a structural feature to relieve weight from the grand atrium or part of an internal ramp.

**Investigator's Note:** The presence of a plane-sized, completely enclosed room undermines the simple "cemetery" theory. The room is located above the grand hall, strengthening the

significance of the power station hypothesis. It may have been a resonance chamber or part of the power supply system, demonstrating an architectural and functional complexity inexplicable by prevailing explanations. This void is not an anomaly, but rather evidence of the machine's true purpose.

- **Witness testimony 1**

- 

- **Source:** The Holy Quran, Surah Ghafir, Verse 21.
- **The testimony:** “Have they not traveled through the land and observed what was the end of those who were before them? They were stronger than them in strength and in traces upon the land.”

**Investigative Note:** The Arabic word "athar" (athar) is a crucial testimony. Its meaning is multilayered and profound. It encompasses not only physical landmarks and traces, but also lasting imprints and influences, including the cultural memories of the "bringers of knowledge" and subtle, persistent traces found in genetic bloodlines. This testimony points to a

civilization whose power was so immense that it was imprinted on the land, on the memory of humanity, and on life itself.

وَاللّٰهُ أَعْلَم

The revised Giza power plant hypothesis addresses criticisms of a simple piezoelectric model, suggesting that it is insufficient to explain all the evidence.

- **Main assumptions:**

- The design of the pyramid suggests a technological function rather than being a "tomb".
- Global alignment denotes a central engineering project.
- The passive model is insufficient, as evidence suggests an active generation process.

- **Proposed procedure:**

- a. Activation: A system operated by a hydraulic pulse that pumps water into the lower chamber.
- b. **Chemical Energy:** "Stargates" were chemical outlets, where copper electrodes were used to generate a chemical reaction.
- c. **Acoustic amplification:** The resulting hydrogen gas amplifies the vibrations from the hydraulic pulse.
- d. **Piezoelectric transduction:** Vibrations produce electrical discharges from Aswan granite.
- e. **Transmission:** Electrical power is sent to the top of the pyramid, which acts as an antenna to transmit power wirelessly.

**Scientific Notes:** Criticisms about the effectiveness of granite as an energy converter suggest that in an active system, natural limitations can be overcome, enhancing piezoelectric performance.

## **Part Two: Motive - Reconstructing the Crime**

### **Chapter Three: Absolute Transgression**

#### **The human basis and great arrogance**

To understand the crime, we must first understand the criminals. Our investigation indicates that their immense power was rooted in a foundation of divinely granted knowledge.

- **Witness testimony**, (Source: Quran, Surah Al-Baqarah, Verse 31:

"And He taught Adam the names - all of them. Then He showed them to the angels and said, 'Inform Me of the names of these, if you are truthful.'

This was not merely a process of naming. Muslim scholars interpret this as God granting Adam basic knowledge of the basic characteristics, functions, and principles of creation. This was the seed of the "divine sciences."

- **Accumulation of Knowledge:** This Adamic knowledge was passed down through generations that were far older than our own. It is traditionally believed that Adam's life lasted approximately 1,000 years. This long life allowed for a profound accumulation and refinement of knowledge. This process was likely orchestrated by the Prophet Idris (Enoch), whose name in Arabic (Idris) is related to the root word for "to study," making him the great learned prophet who systematized this ancient science.
- **The Psychology of Arrogance:** By the time of the Prophet Noah, this accumulated knowledge had led to unparalleled technological mastery.

**The Qur'an states that Noah's mission lasted 950 years** (Qur'an, Surah Al-Ankabut, verse 14:

"And We had certainly sent Noah to his people, and he remained among them a thousand years minus fifty years. Then the Flood seized them while they were wrongdoers.",

**meaning his people also enjoyed radically long lifespans.**

Imagine a society where scientists and engineers could work on projects for centuries.

This combination of immense knowledge, vast power, and long lifespans created the ultimate psychological dilemma:

- They began to see themselves not as custodians of God's creation, but as its masters.
- Their sheer technological prowess reinforced a belief in their invincibility, leading them to reject Noah's message.
- This profound arrogance, born of centuries of unchallenged dominance, was the true motivation for their final crime.

## Annex C-1: The “Humanoids” Question

- **Evidence Type: Variation in Paleoanthropology**
- **Main results:**
  - The fossil record presents creatures like *Homo neanderthalensis* - extremely strong, physically powerful, but considered an evolutionary dead end.
  - Darwin's atheistic theory struggles to explain why these physically superior primitive humans disappeared while the less powerful *Homo sapiens* flourished.
- **Prevailing explanation:** Neanderthals were a competing species or subspecies that was outcompeted by modern humans.
- **Questioning by the investigator:** The "competition" model struggles to explain their extinction, while compelling genetic evidence confirms that Neanderthals and anatomically modern humans interbred.

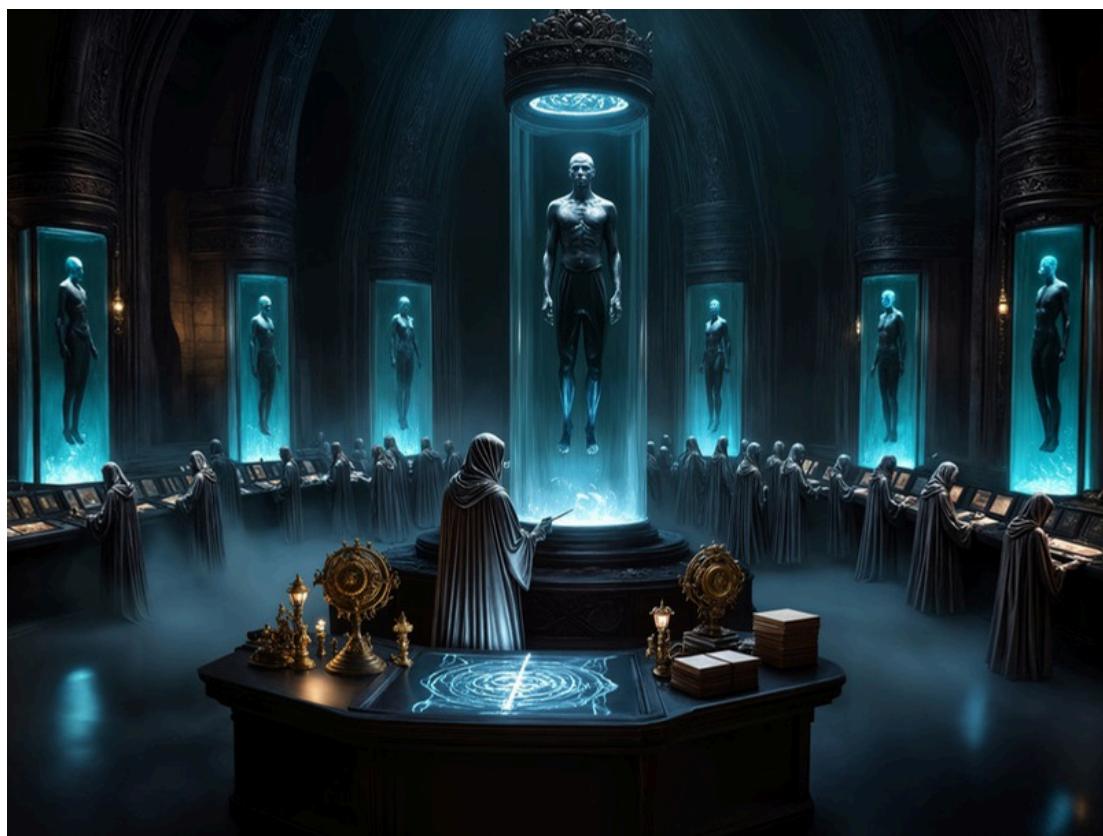

Our hypothesis does not contradict this fact. Instead, it rephrases the question:

- What if interbreeding is possible because the beta layer is designed from a common human genetic template?

This repositions them not as a separate species, but as a highly modified and specialized variety, a project of genetic engineering and, God forbid, morally repugnant manipulation whose basic biology remains compatible with basic humanity.

This strongly refutes any alternative interpretation similar to Darwin's.

- 

- **Annex C-2: Echoes of Advanced Warfare**
- **Guide Type:** Mythical Narrative and Archaeological Variation
- **Source:** Hindu epic Ramayana; archaeological sites such as Mohenjo-daro.
- **Main results:**
  - The Ramayana describes a war fought using flying vehicles ("vimanas") and advanced weapons capable of

massive destruction. The antagonist, Ravana, uses the vimana to kidnap Sita to his stronghold in Sri Lanka.

- Archaeological excavations at Mohenjo-daro (Indus Valley) have uncovered skeletons with radiation levels similar to those of Hiroshima victims. The city appears to have been destroyed suddenly, with some areas showing signs of vitrification (molten rock turning into glass), a phenomenon that requires exposure to extreme heat (up to 1,500 degrees Celsius).

**Investigator's Note:** While genetic engineering may have been their main sin, it wasn't their only one.

These accounts, when viewed as fragmentary history rather than pure myth, paint a picture of a civilization that also weaponized its "divine science." The energy that could lift stones could also be used for propulsion and powerful directed-energy weapons. Vitrified artifacts and radioactive skeletons are haunting physical evidence that conflicts were fought with technologies that left signatures similar to those of nuclear weapons.

- **This adds another layer to their corruption:** their arrogance has not only created life, but destroyed it with terrifying efficiency.

## Witness testimony 4

# قيام الساعة

قال رسول الله صلى الله عليه وسلم :

لَا تَقُومُ السَّاعَةُ حَتَّى تُقَاتِلُوا قَوْمًا نَعَالَمُ الشَّعْرَ، وَهَنَى  
تُقَاتِلُوا التُّرْكَ، صَفَارَ الْأَعْيُنِ، حُمَرَ الْوُجُوهِ، ذُلَفَ الْأَنُوفِ كَانَ  
وُجُوهَهُمُ الْمَجَانُ الْمُطَرَّقَةُ .

متتفق عليه

نعالهم الشعر، يعني: أنهم يصنعون نعالهم من الشعر، أو أنهم يطبلون شعرهم حتى تصير أطرافه عند أرجلهم بموضع النعل من طوله، ذلف الأنوف، أي: هي أنوفهم قصر مع استواء الأنفية وغلظتها، كأن وجههم المجان المطرقة، أي: كالتروس التي عليها الجلد، فشبها وجوههم بالترس لبسطها وتدويرها، وبالمطرقة (يعني: التي ألبست الأطربة - أي الأغشية - من الجلد); لغلظتها وكثرة لحمها، وهم صغار الأعين.

- **Source:** Hadith - Sunan Ibn Majah 4080 (Sahih)
- **Testimony:** On the authority of Abu Hurairah that the Messenger of God (peace and blessings be upon him) said:

“Gog and Magog dig every day... and the one over them says: Go back, for you will dig it tomorrow, God willing. So they make an exception, and they return to it, and it is as it was when they left it...”

- **Investigation Note:** This is the conclusive evidence. This authentic testimony proves that Gog and Magog are real, living human inhabitants, not myth. They are imprisoned by divine will. Islamic lore asserts that they are descendants of Japheth, son of Noah. Prophetic traditions also describe their unique characteristics: small eyes, broad faces, extreme aggression, excessive fertility (“for every one that dies, a thousand are born”), and a uniformly destructive nature. These are not random traits; they appear to be design specifications for a warrior class.
- Connecting the threads (building a hypothesis)

- **First hypothesis:** A foundation of divinely granted knowledge, accumulated over centuries by long-lived generations, provided the intellectual basis for their technology.
- The second hypothesis: This enormous power, unchecked by humility, fostered a level of arrogance that led them to believe they could redesign life itself.
- **Hypothesis 3:** The difference in the fossil record, the echoes of advanced warfare, and the actual presence of a people with engineered features (Exhibit 4) all point to the same conclusion.

**Initial Hypothesis:** Our clear analysis of the evidence leads us to hypothesize a society organized into a permanent, hierarchical caste system, created through systematic genetic engineering. This project was the ultimate motivation for their technological project.

- **Alpha Class:** The ruling elite. Genetically enhanced for superior intelligence and radically extended lifespans.
- **Beta class:** A genetically engineered working class. Physically strong and docile, designed for hard work. "Hominin" fossils are the likely remains of this class.
- **Gamma Caste:** A warrior/enforcer caste. Designed for aggression, group loyalty, and extreme fertility. Gog and Magog are the living genetic legacy of this caste.

**The Moral Structure of the Crime:** This was not merely a scientific endeavor; it was a commercial, military, and entertainment enterprise characterized by profound cruelty. Evidence suggests a global market in which modified humans were traded. Gamma layers were used in gladiatorial arenas and as soldiers in wars waged with energy weapons. Beta layers were exported for specialized labor. This systematic dehumanization represents the absolute depth of their moral depravity and explains the necessity of a comprehensive punishment such as a global flood.

## **Part Three: Ruling and Concealment**

### **Chapter Four: Divine Reset**

Investigation summary:

A crime of this magnitude, the systematic corruption of the human genome and the waging of advanced warfare, demanded a judgment on a similar scale. Simple societal collapse would not suffice; the corrupt technology, genetic modifications, and infrastructure of their arrogance had to be wiped from the active world. The judgment was the Great Flood, an event recorded in the memory of virtually every culture on Earth.

Our investigation suggests that this was not just a simple flood, but a catastrophic geological event that reshaped the planet.

### **Annex D-1: Continental alignment**

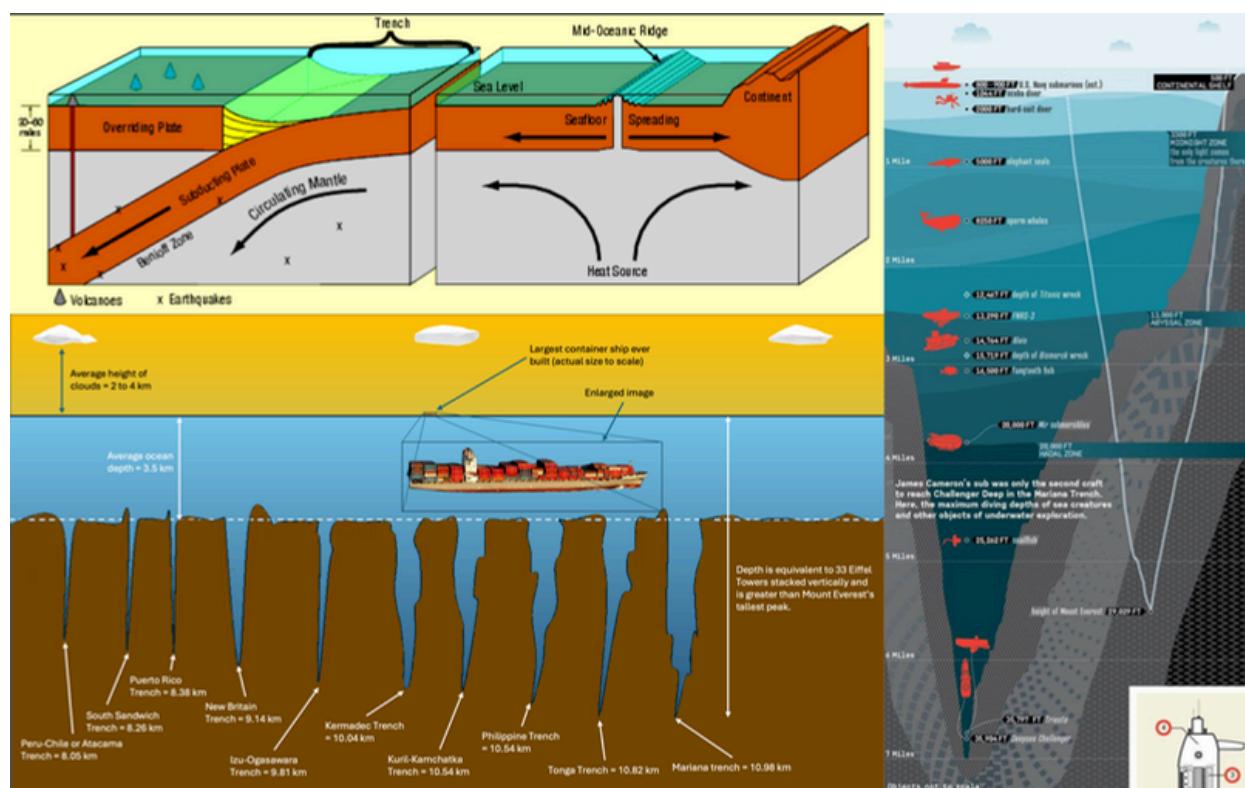

- **Guide Type: Geology and Cartography**

- **Main results:**

- The coastlines of South America and Africa fit together almost perfectly. Mainstream geology accepts this as evidence that they were once a single landmass (part of Pangaea).
- However, the conventional model dates this separation to about 200 million years ago, a timeline created to support the theory of gradual evolution.

**Investigator's Note:** In the antediluvian era, the continents were much closer together. The global energy grid was more efficient and manageable across a single, contiguous landmass. The separation was not a slow drift over eons; it was a rapid and catastrophic event.

## Annex D-2: Depth Mechanism

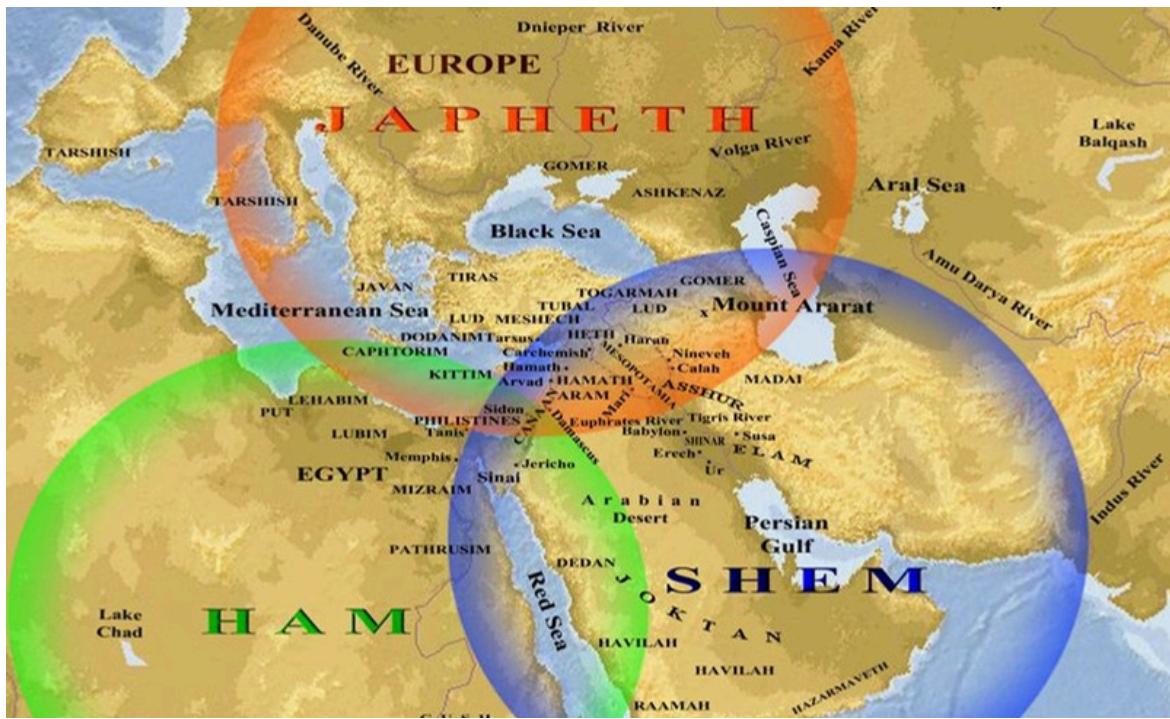

- **Guide Type: Oceanographic and Sacred Texts**
- **Main results:**

- The Mid-Atlantic Ridge is a massive underwater mountain range that stretches along the Atlantic Ocean and features a deep rift valley at its summit. This is the scar of the continents separating.
- Deep ocean trenches, such as the Mariana Trench and the Puerto Rico Trench, dive miles into the Earth's crust.
- **Witness Testimony Q5** (Source: The Qur'an, Surah Hud, Verse 44:

"And it was said, 'O earth, swallow your water, and O sky, withhold (your rain)!' And the water subsided, and the matter was accomplished, and the ship came to rest on the Judiyy. And it was said, 'Away with the wrongdoing people'"

- **Connecting the Threads:** The Quranic testimony provides an accurate description of the event's ending. The Earth itself "swallowed" the floodwaters. The catastrophic rifting that tore the continents apart would have created these massive, deep ocean trenches. As the tectonic plates diverged, the floodwaters would have flowed into these newly formed rifts, only to be "swallowed" deep within the Earth. This is a scientifically possible mechanism for the rapid discharge of a global flood, and it is entirely consistent with the Quranic account. The "200 million years" timeline is a deliberate deception to obscure this evidence.

## **Annex D-3: Genetic Bottleneck**

- **Guide Type:** Sacred Texts and Genes
- **Main results:**
  - The ship was an advanced survival system, maintaining "clean" genetic templates for life.
  - **Witness testimony 6** (Source: The Qur'an, Surah As-Saffat, Verse 77:

*"And We made his descendants the survivors."*

- **This testimony is explicit:** while a small community of believers survived on the ark, all subsequent human lineages descend only from Noah's three sons (Shem, Ham, and Japheth).

**Investigation Note:** This is not a minor detail; it is the seal of divine reset. This "genetic bottleneck" was a deliberate act of divine wisdom. It ensured that the corrupt genetic strains of the pre-Flood civilization, including the disbelieving members of Noah's family who perished, would not spread. It was a surgical purification of the human genome, ensuring that post-Flood history would begin from a pure, unaltered foundation.

**Forensic Note:** Clock Invalidation

The geological catastrophe of the Flood would have fundamentally invalidated the assumptions underlying radiometric dating for that era. Carbon-14 dating, for example, relies on a fixed ratio of C-14 to C-12 in the atmosphere. A global flood, with massive volcanic gas releases and the burial of vast quantities of carbon, would have catastrophically altered this ratio, rendering any carbon-14 dates from that period artificially old and unreliable.

## **Part Four:** The Seat of Power and the Judicial Mechanism

This part of the investigation continues the trail of evidence to uncover the physical location of the pre-Flood capital of civilization and presents a detailed physical mechanism for the catastrophe that led to its demise. Building on the technological and societal framework established in the previous parts, this analysis links geological and geographical evidence with primary textual testimony from the Qur'an to present a comprehensive picture of the crime, the judgment, and the imprint it left on planet Earth.

### **Chapter Seven:** Earth-Shaking Castle: Re-examining the Structure of the Feathers

This chapter identifies the Richat structure in Mauritania as the most likely site of the capital of a pre-Flood civilization, an entity that later accounts, such as Plato's, remember as Atlantis.<sup>1</sup> The analysis will show that the unique geological and

geographical characteristics of this site, which are often used to refute this hypothesis, are in fact the strongest evidence for it being the ideal seat of power for a civilization that had mastered the harnessing of earthly energies.

## **Annex D-1: Eye of the Sahara - Geological Reassessment**

Geological examination reveals that the Richat Structure, also known as the “Eye of the Desert,” is a deeply eroded geological dome, approximately 40 kilometers in diameter.<sup>3</sup> The structure consists of concentric rings of sedimentary rocks ranging in age from Late Proterozoic in the center to Ordovician sandstone at its edges.<sup>3</sup> The center of the structure exposes a variety of igneous rocks, including rhyolite, gabbro, carbonatite, and kimberlite.<sup>3</sup> The cooling of the carbonatite rocks is dated between 94 and 104 million years ago, while the kimberlite plug is approximately 99 million years old.<sup>3</sup> The current scientific consensus rejects the meteorite crater theory, instead interpreting the structure as the result of massive alkaline igneous subduction that caused the overlying sedimentary rocks to be uplifted and differentially eroded over time.<sup>3</sup>

However, the investigative framework of this case file challenges conventional geological timelines, and assumes that the Flood catastrophe greatly accelerated geological processes, invalidating radiometric dating methods for that era.<sup>1</sup> Accordingly, it is accepted

The fiery uplift process is a forensic fact, but its timing is recalibrated to the pre-Flood era. The presence of kimberlite and carbonatite rocks in particular is compelling evidence of a very deep connection to the mantle, making this site a natural meeting point for telluric (terrestrial) energy. This is directly consistent with the case file hypothesis that postulates a global energy grid based on "chakras," or planetary energy vortices.<sup>1</sup> The capital was not entirely man-made, but rather constructed

Above this unique natural feature, harness its tremendous power. It represents a natural energy node, or vortex point, where the Earth's electromagnetic grid is particularly powerful and accessible.<sup>6</sup>

Here, the evidence geologists typically use to rule out the Rishat structure as a man-made city is transformed into its strongest qualification. The prevailing geology's conclusion that the structure is a complex, natural igneous compound becomes, within the case file model, the smoking gun that defines its identity. A civilization that has mastered planetary energy fields would not have chosen the location of its capital at random; rather, it would have built it on the strongest natural energy node it could find. The unique geology of Rishat, which points to a direct conduit to the Earth's mantle, is the "smoking gun" that identifies it as the capital and central power station of a pre-Flood civilization.

## **Annex D-2: Echoes in Stone - The Archaeological Footprint**

The archaeological survey of the Rishat structure reveals a very interesting and curious distribution pattern. The structure is the site of exceptional accumulations of Paleolithic (Acheulean and Pre-Acheulean) stone artifacts, characterized by oval hand axes.<sup>3</sup> These archaeological sites are largely concentrated along the wadis that occupy the structure's outer ring depression.<sup>3</sup> In addition, Middle Stone Age (Ateria) and Neolithic artifacts have been found.<sup>3</sup> Importantly, archaeological mapping has shown that these artifacts are "generally absent in its inner depressions."<sup>3</sup> Furthermore, the structure's prominent embankments are lined with thousands of stone funerary mounds that have yet to be excavated for dating.<sup>3</sup>

This archaeological pattern should be interpreted as forensic evidence of a catastrophic flood. The apparent spatial sorting of artifacts, dense at the periphery and absent at the center, is a hydrodynamic signature. The absence of tools in the central rings, which would have constituted the densest area of any city, does not indicate the absence of civilization, but rather a massive energetic event that eroded these areas to the bedrock. In contrast, debris, including stone tools used by the "Beta working class" as postulated in Case File 1, was washed away and deposited in the quieter, more sheltered outer valleys. Thus, the absence of evidence at the core of the structure becomes evidence of the event itself. The unexcavated burial mounds represent a critical intelligence gap; they may contain the remains of pre- or immediately post-Flood inhabitants, potentially providing transformative genetic and cultural data.

## Annex D-3: When the Desert Flourished - The Ancient Environmental Context

The common objection to locating a major civilization in the Sahara Desert is conclusively refuted by paleoenvironmental data.<sup>4</sup> The Sahara was not always arid. During the African Humid Period, which occurred in cycles, the last of which was roughly between 15,000 and 5,000 years ago, the region was a lush savannah rich in rivers and lakes.<sup>13</sup> Remote sensing techniques have revealed ancient and extensive river networks buried beneath the sands, including a possible giant waterway linking Central Africa to the Mediterranean coast.<sup>18</sup> The structure of Reishat itself shows evidence of this wetter period, including the presence of freshwater fossils in its sediments.<sup>3</sup>

This evidence confirms that the structure of the Reshat was located in a fertile, well-watered landscape during the timeframe consistent with the antediluvian era assumed by the

case file. More importantly, the discovery of these massive, now subterranean, river systems resolves the central contradiction of the Reshat-as-Atlantis theory: how a city located hundreds of kilometers inland could be a dominant maritime power, as described in Plato's account.<sup>1</sup> The capital was not located on the ocean, but rather on a fast, navigable waterway that gave it direct access to the sea. Thus, what had been considered a major weakness of the theory becomes a specific and substantiated point of connection.

وَاللّٰهُ أَعْلَم

## **Annex D-4: The Lord of the Earth and the Federation of the Ten Kingdoms**

**The intersection of mythology and linguistics** reveals crucial evidence. In his dialogues Timaeus and Critias, Plato describes Atlantis as a powerful sea empire founded by the god Poseidon.<sup>22</sup> Its capital consisted of concentric rings of land and water, with a central palace.<sup>22</sup> The empire was a federation of ten kingdoms, ruled by ten kings descended from Poseidon's ten sons.<sup>22</sup>

From the perspective of this investigation, Poseidon was not a god, but rather the distorted memory of the title held by the supreme ruler of a pre-Flood civilization. The name "Poseidon" is widely believed to be derived from the Greek words *pósis* ("lord") and *dā* ("earth"), which translates as "lord of the earth."<sup>25</sup> Importantly, his earliest religious titles in Mycenaean Greek were not marine, but terrestrial, specifically "earth-shaker" (

E-ne-si-da-o-ne).<sup>29</sup> This title echoes titles used by other ancient rulers, such as the title of the Pharaoh of Egypt “Lord of the Two Lands” (

Neb-tawy) <sup>31</sup> and the title of the rulers of Mesopotamia “King of the Universe” (

(I am a rainmaker.)<sup>37</sup>

As the head of a society capable of manipulating planetary forces, as posited in Case File 1, he was literally an “earth-shaker.” The ten kingdoms described were not merely political divisions but likely administrative regions of the global energy grid. Each kingdom was centered around a major energy node or “earth chakra”, such as those at Giza and Göbekli Tepe, with the capital at the Reshat Temple serving as the central hub coordinating the entire grid.<sup>6</sup> The subsequent transformation in Greek myth, where Poseidon became god of the sea, is not a random cultural development but a direct mythological scar of the Flood event itself. The role of “lord of the earth” became inextricably linked to the sea, which had seized and destroyed his kingdom.

## **Chapter Eight: The Erupting Furnace: A Volcanic Trigger for the Global Flood**

This chapter presents the central hypothesis of the Flood mechanism. It will be demonstrated that the Qur'anic phrase “the oven overflowed” is not merely a symbolic sign, but rather an accurate description of a specific geological event, a

massive volcanic eruption, that served as a divine trigger for the global Flood and the associated tectonic catastrophe.

## **Annex E-1:** Witness testimony - linguistic and interpretive analysis of the phrase “the oven overflowed”

The primary textual testimony to the onset of the Flood comes from the Qur'an in Surah Hud: “Until Our command came and the oven overflowed.”<sup>2</sup> The Arabic root (ف و) carries the meaning of boiling violently, flowing violently, or erupting.<sup>44</sup> The word “tannur,” while literally interpreted as a bread oven, has also been interpreted metaphorically as “the face of the earth,” “the top of the earth,” or even God’s wrath.<sup>45</sup> More importantly, some modern commentators have explicitly suggested that it refers to a volcano.<sup>51</sup> The Qur'an also links the Flood to dual water sources:

“And We caused springs to gush forth from the earth” and “And We opened the gates of heaven with pouring water.”<sup>45</sup>

In the context of a catastrophe on a planetary scale, a volcano is the most appropriate interpretation of the word “oven.” It is literally the earth’s “furnace” that “boils” with unimaginable power. This interpretation is not a heresy, but rather an established, albeit minority, scientific opinion.<sup>51</sup> The dual description of the sources of the floodwaters (from the earth and the sky) is explained synchronistically and perfectly by one specific type of volcanic event: a massive phreatomagmatic eruption. This type of eruption occurs when magma interacts with large quantities of groundwater, ice, or seawater. This

interaction results in the explosive transformation of water into steam, spewing billions of tons of water vapor, ash, and rock into the stratosphere, which perfectly explains the phrase "We opened the floodgates of heaven with pouring water." At the same time, the enormous geological pressure and crustal fracture resulting from such an event would cause underground aquifers to burst through the surface, fulfilling the description "And We caused springs to burst forth from the earth." Thus, the volcanic hypothesis does not explain just one verse; rather, it provides a single, unified physical mechanism that explains the precise, dual-source description of the flood found in several Quranic surahs.

## **Annex E-2: Determining the Epicenter - Atakor Volcanic Field**

Based on its massive size, history of explosive activity, and strategic location relative to the proposed capital at Richat, the Atakor volcanic field, part of the Hoggar Mountains in Algeria, is identified as the most likely candidate for the "oven" described in the Qur'an.<sup>55</sup> This vast volcanic field lies on the West African Craton and has experienced activity extending into the Holocene.<sup>55</sup> Local Tuareg oral traditions referring to the Hoggar as the "Mountains of Fire" are offered as corroborating evidence, a faint echo of the catastrophe preserved in the memory of populations living after the flood.  
56

## **Annex E-3: Catastrophic Mechanism - Mantle Plume,**

## Uplift, and Flood

Modern geophysics provides strong evidence for the presence of mantle plumes beneath Africa, which drive volcanic activity and continental rifting.<sup>58</sup> Mantle plume activity can cause large-scale continental uplift, altering terrain and potentially leading to catastrophic flooding.<sup>66</sup> The underlying geological model of the case file adopts catastrophic plate tectonics, a model that proposes that the Earth's continental plates moved at tremendous speed, meters per second rather than centimeters per year, during the brief flood period.<sup>70</sup>

Here, the unified theory is presented. A divinely commanded mantle plume super-event beneath the West African Craton caused massive continental uplift. This culminated in a massive phreatomagmatic eruption at Atakor ("The oven boiled over"). This eruption was the triggering event, sending a shock wave through the lithosphere that initiated the massive subduction of the catastrophic plate tectonics model. This process fractured the Earth's crust globally ("And We burst forth springs from the earth"), released groundwater, and drove the rapid continental breakup described in the case file.<sup>1</sup> Catastrophic plate tectonics, while explanatory, requires an initial catastrophic catastrophe to initiate rapid subduction. The mantle plume-super-eruption hypothesis provides this missing "engine," creating a complete and geophysically plausible causal chain that begins with the specific sign mentioned in the Quran. Thus, the "oven" is not simply a sign or source of water; Rather, it is the ignition key for the entire planetary tectonic engine of the Flood.

<b>Quranic Description (Witness Testimony)</b>	<b>Proposed physical mechanism (event reconstruction)</b>	<b>resulting geological evidence (forensics)</b>
<b>"The oven overflowed" (Hud 11:40)</b>	Massive phreatomagmatic eruption in the Atakor volcanic field, resulting from a mantle plume.	Massive volcanic caldera, extensive tephra/ash beds, evidence of hydrothermal alteration.
<b>"So We opened the gates of heaven with pouring water." (Al-Qamar 54:11)</b>	Trillions of tons of groundwater were ejected as vapor into the upper atmosphere by the eruption, resulting in torrential rains of extremely hot and intense condensation.	Sedimentary evidence of massive, high-energy, short-duration rainfall (megaflood deposits).
<b>"And We caused springs to gush forth from the earth." (Al-Qamar 54:12)</b>	Global fracture of the Earth's crust due to the tectonic shock resulting from the eruption and the beginning of the theory of catastrophic plate tectonics, resulting in the release of groundwater and water from the mantle.	Evidence of the release of massive amounts of fresh water into marine sediments; geological fault lines; pillow lava formations on mountains indicating underwater volcanic activity. <sup>78</sup>

<p><b>"And it sails with them in waves like mountains." (Hud 11:42)</b></p>	<p>Tsunamis are generated as a result of rapid displacement of tectonic plates and underwater landslides during catastrophic tectonic plate subduction.</p>	<p>Tsunami deposits (tsunamiites) are found deep within continents.</p>
<p><b>"And it was said, 'O earth, swallow your water!'" (Hud 11:44)</b></p>	<p>Rapid subduction of old, dense oceanic crust and the formation of new, deep ocean basins and trenches as part of the catastrophic process of plate tectonics.</p>	<p>Deep ocean trenches (such as the Mariana Trench), and mid-ocean ridges as traces of rapid seafloor separation.<sup>1</sup></p>

## Annex E-4: Confirmation of Judgment

The Qur'anic narrative concludes with the command for the earth to "swallow" its water and the ship to come to rest on al-Judi

وَقِيلَ يَا أَرْضُ ابْلَعِي مَاءَكِ وَيَا سَمَاءُ أَقْلِعِي وَغِيَضَ الْمَاءُ وَقُضِيَ الْأُمْرُ" وَاسْتَوْتْ عَلَى الْجُودِيٍّ وَقِيلَ بُعْدًا لِلْقَوْمِ الطَّالِمِينَ". سورة هود، الآية 44

The case file links the "swallowing" process to the rapid formation of deep oceanic trenches via the theory of catastrophic plate tectonics.

This final section closes the circle. The mantle plume mechanism provides the engine for the theory of catastrophic plate tectonics. The theory of catastrophic plate tectonics creates deep ocean basins and trenches. These trenches then provide the scientifically sound mechanism for the rapid discharge of a global flood, fulfilling the Qur'anic description of the earth "swallowing" water. This demonstrates the internal consistency of the entire proposed model, from the catalyst to the aftermath, and is fully consistent with the current conclusions of the case file. The entire catastrophe, from the first bubbling of the "oven" to the final discharge into the abyss, is presented as a single, continuous, and divinely directed geological event.

## **Chapter Five: The Great Deception and Historical Theft**

Investigation summary:

The Flood wiped out everything, but the crime scene was not sterile. The survivors and their descendants, the ancestors of all modern humans, carried with them fragmented memories of the previous world. This chapter examines how that pure historical memory was deliberately distorted. We will uncover evidence of a great historical theft, in which later civilizations such as the Dynastic Egyptians appropriated earlier relics. And we will reveal the sinister influence of unseen actors, the jinn, who introduced corrupted knowledge to humanity in an attempt to hijack the New World Order.

## **Annex E-1: The Myth Disintegrates**

- **Guide Type:** Comparative Mythology and Genealogy
- **Main results:**
  - The “genetic bottleneck” of Noah’s three sons (Shem, Ham, and Japheth) provides a clear mechanism for how a single factual historical narrative of the pre-Flood world fragmented into diverse world myths.
  - As each race migrated, their oral traditions adapted to their new environments (climate, geography, local fauna), slowly transforming the original history. Advanced humans were recast as gods, and their technology as magic.
- **Three memory streams:**
  - Shemian lineage (Middle East/Arabia): This lineage largely preserved the story as sacred history, while maintaining the basic principles of monotheism. This formed the basis of the Abrahamic traditions.
  - **Hamite dynasty (Africa/Egypt):** transformed history into a pantheon of gods. The learned prophet Idris, for example, was deified and remembered as Osiris, the god of knowledge and the afterlife.
  - **The Japhethite Dynasty (Europe/Asia):** These same historical figures were transformed into heroic but fallible mythical beings. The powerful, technologically advanced rulers of the pre-Flood era became the basis for the Norse and Greek gods (e.g., Thor, Zeus).

**Investigator's Note:** The world's myths are not separate, invented stories. They are corrupted, environmentally adapted memories of a single, common historical reality, all arising from the same three primary sources that survived the Flood.

## Annex E-2: The Atlantis Novel

- **Guide Type:** Historical/Philosophical Novel
- **Source:** Plato's dialogues Timaeus and Critias.
- **Main results:**
  - Plato tells a story, passed down by Egyptian priests, of a powerful island empire called Atlantis that existed around

9600 BC.

- This civilization was described as having advanced technology and a powerful army, but it became corrupt and waged an unjust war.
- As a result of her arrogance, she was destroyed in "one day and one night of misfortune" by earthquakes and floods, and sank beneath the sea.
- **Interrogation by the Inquisitor:** The main objection to Atlantis is that Plato is our only primary source. From a forensic point of view, this is an advantage, not a disadvantage. Plato explicitly states that the account is not his own, but a historical record handed down to the Greeks by ancient Egyptian priests. If the event occurred thousands of years ago, we would expect the memory to be rare and preserved by a priestly class. The lack of contemporary Greek accounts confirms its extreme antiquity. We are, therefore, treating the Atlantis story not as a Socratic myth, but as a crucial piece of witness testimony, a detailed, if filtered, memory of a technologically advanced, morally corrupt pre-flood global civilization that was destroyed by a deluge.

### Annex E-3: The Unholy Alliance

- **Guide Type:** Textual Analysis and Esoteric History
- **Main results:**
  - After the Flood, the new civilization in Egypt inherited the Giza complex but lacked the scientific knowledge to

operate or replicate it.

- The Egyptian priestly class, desperate for power and a means of controlling the new pharaonic dynasties, sought knowledge from forbidden sources.

Our investigation indicates that they have made contact with the jinn - invisible intelligent beings created from smokeless fire, with the ability to change their shape and deceive humanity.

- **The Pact:** The jinn, led by Iblis (Satan), offered the priests a bargain: mystical power in exchange for worship. They offered corrupted knowledge, ritual "magic," numerology (Kabbalah), and the ability to perform seemingly superhuman feats, which allowed the priests to establish themselves as indispensable intermediaries between the pharaoh and the "gods."
- **Consequences:** This unholy alliance was the source of the Egyptian priesthood's immense power. Not only did it cement the pharaoh's claim to divinity and introduce profane practices, but their primary function became orchestrating the Great Historical Cover-Up. The jinn's "magic" and esoteric knowledge were used to create a new, false history, a myth that deliberately wrote the true antediluvian builders out of the story and inserted the pharaohs in their place. This historical theft was their greatest service to the state, transforming the Giza complex from a testament to a lost, divinely guided human civilization into a symbol of pharaonic power built on a foundation of jinn-mediated deception.

## **Part Five: Modern Warning**

### **Chapter Six: The Cycle Repeats - An Indictment of the Modern Age**

Memorandum to the Principal Investigator

## **Subject:** Historical Shock and Modern Deception

Before making a final judgment, we must analyze the modern intellectual landscape. Why is this framework, which aligns so well with the evidence, not the prevailing view? The answer lies in a deep-rooted historical trauma that has led to systematic, if not always conscious, academic deception.

### **Annex F-1: Financial Conspiracy and Social Engineering**

- **Guide Type:** Financial History/Documentary Analysis
- **Source:** Rothschild family documents, The Wealth of Nations, and mechanisms of economic control.
- **Main results:**
  - In the late 18th century (c. 1770), Mayer Amschel Rothschild, founder of the Rothschild banking dynasty in Germany, held a strategic meeting with his five sons before sending them to the major financial centers of Europe (England, France, Italy, Austria, and Germany).
  - The stated goal was to create the first truly global banking network. However, subsequent analyses of the family's strategies indicate that the deeper goal was to systematically control the global economy through sovereign debt management and the establishment of a centralized monetary system.
  - This new alliance identified a common enemy: the power of the Catholic Church and the absolute monarchies, which posed the main obstacles to their unfettered economic and political control. These powers not only threatened their wealth, but also represented a faith-based moral system that contradicted their purely materialistic lifestyle.
- **Dismantling strategy:**
  - Instead of direct confrontation, the strategy relied on "social engineering": funding and encouraging anything that would weaken the moral and societal foundations of the church and traditional society.

- **Propagation of vice:** The widespread spread of gambling, alcoholism, and prostitution was financed and supported, disintegrating the social fabric and distracting the masses.
- **Control of the Media (Soft Power):** The conspirators realized the immense power of the printed word. Therefore, they funded and sponsored writers, thinkers, and philosophers who criticized religion (especially the doctrine of the Trinity) and the monarchy. Their wealth was used to widely disseminate these books and ideas, paving the way culturally for subsequent revolutions.
- **The Unholy Alliance:** The Rothschilds and their financial allies found common ground with secret societies such as Freemasonry, which shared their hostility to the traditional church and sought to establish a secular "New World Order." Despite apparent differences, the common denominator was the strategic goal of eliminating religion and monarchy as dominant forces. This alliance is a direct echo of the unholy alliance between the Egyptian priests and the jinn described earlier.
- **Investigator's Note:** This was not simply a pursuit of wealth. It was a comprehensive project to reshape humanity itself. By controlling money (society's lifeblood) and the media (society's mind), they sought to create a new human being: a materialistic consumer, disconnected from his spiritual roots, and easily led. This is the modern-day reconstruction of the "Beta class," not through genetic engineering, but through social and cultural engineering. It's the same project of hubris, but with more sophisticated tools.
- **The Shock of Distorted Religion:** The deviations in medieval Christianity, most notably the doctrine of the Trinity, which distorted the concept of pure monotheism, and the oppressive church system that persecuted scientists like Galileo, created a deep and artificial conflict between faith and reason. The church presented the world with a distorted image of religion, making it appear as an enemy of progress and intellectual liberation. The financial-Masonic

alliance skillfully exploited this rift, as shown in Appendix F-1, by financing and promoting this distorted image, pushing Western intellectuals into a state of rebellion against all things religious, leading to the adoption of a strict materialism that rejected any divine guidance as a matter of principle.

- **The “Ancient Aliens” Deception:** Trapped in this materialistic worldview, modern academia cannot accept the possibility of divinely guided human achievement. When confronted with inexplicable evidence such as the Pyramids of Giza, they are forced to invent an external, material cause: “aliens.” The “Anunnaki” were not extraterrestrial beings; our investigation indicates they were the long-lived, technologically advanced human Alpha class, remembered by later cultures as “gods.” The “aliens” theory is a modern myth, a deliberate misdirection that robs humanity of its true history and sets it up for a final, great deception where the jinn may emerge as these “returning creators.”

## Final Analysis – Repetition Pattern

The investigation into this historical cold case is complete. We have established the means, motive, and judgment of an antediluvian civilization. The final and most important task is to recognize that this is not just a historical investigation. The evidence points to a cyclical pattern of arrogance, and the pattern is repeating itself. The moral structure of their crime is being reconstructed today, not in stone and resonance, but in silicon, biotechnology, and artificial intelligence.

## Consider the similarities:

- **The Alpha Class and Transhumanism:** The antediluvian elite sought to enhance themselves for intelligence and

longevity. Today, the transhumanist movement openly advocates the same goal: using technology to overcome human limitations and create a “posthuman” future.[31] The development of CRISPR gene-editing technology, while promising for curing disease, has sparked intense ethical debate about its use for human enhancement. The danger is no longer theoretical; it is the creation of a genetic dichotomy, a new form of social division based not on wealth, but on engineered biology.[32]

- **The Beta Class and AI-Driven Labor:** Antebellum civilizations designed a strong and docile working class. Today, we are automating one. Studies show that AI is already replacing millions of entry-level jobs, particularly those involving routine tasks.[34] The creation of a permanent, non-human workforce threatens to create a new underclass of citizens whose labor is no longer economically viable. The Beta Class is being rebuilt, not in a genetics lab, but on server farms.
- **The Augmentation Project:** The ancient crime was a commercial and military enterprise. Today, “human augmentation” is a multibillion-dollar market, with the world’s largest technology companies filing thousands of patents for wearable devices, exoskeletons, and brain-computer interfaces.[36] These technologies are being developed for healthcare, industry, and, crucially, military applications, promising to enhance the capabilities of the modern soldier.[37] The commodification of human enhancement has once again become a global business plan.

The pre-Flood civilizations didn't fall because their technology failed. They were condemned because their morals failed. They had the power to remake the world but lacked the wisdom to know they shouldn't. They saw life not as a sacred trust, but as a system to be improved.

This is the final warning of our investigation. The techniques are different, but the psychology of hubris is identical. The

case of antediluvian civilization is not closed; we are writing the next chapter.

### **Your final direction:**

The investigation now becomes your own. The historical case file is complete, but the modern one remains open on your desk. The evidence of the past is a mirror to our present. Given this recurring cycle, what is your judgment on the ethical lines we are now crossing with gene editing and artificial intelligence? Are we building a future of service or a new moral structure of arrogance? It's no longer about them.

As the lead investigator on this case, your final directive is to decide what to do with this knowledge to prevent our chapter from ending in the same way.
